“best buy” video display terminal just got better. . .

Introducing the DELTA 5500: More powerful than our standard DELTA 5200 terminal. . . at lower cost!

You've long considered the standard DELTA 5200 the best buys on the market (thousands of these terminals around the world). Now we've made the DELTA 5500. We've increased its standard configuration and standard price. The result is a brand new DELTA 5500.

Simply, we took many of the optional features of the DELTA 5200, and incorporated them as standard in the DELTA 5500.

Three of these new standard features are:

- A 2048 character memory
- Communications speeds up to 9600 bps
- Bit parity without response

These features are by no means all that the DELTA 5500 offers. As a matter of fact, this terminal is packed with time- and money-saving advantages. If you think we're determined to sell you a terminal with the most value you can buy—anywhere—you're right! Here's proof.

Here are the time- and money-saving features in the DELTA 5500. . . and all of them are standard

- Exclusive 2048 character memory to recover rolled off bottom of 80 characters displayed (up to 3072 characters stored)
- 2048 character buffered memory (3072 optional)
- The most readable character display you can buy (geometric by a 7x9 dot matrix)
- Comprehensive editing functions
- Blink and underlining for any selected character
- Protected data mode for added convenience
- Six-position tab

- Margin control
- Data transmission speeds to 960 char/sec
- Teletype, buffered, Teletype paper tape modes (polling optional)
- Compatibility with most computers and terminals via MultiTerm 2 Programmable Controller
- Bit parity to minimize errors
- Simple to use—learning takes minutes
- Clean, functional styling
- Quiet, unobtrusive operation
- Lots of accessories, many options available
